Our Vision	2
Baluster Railing	4
Framed Glass	6
PUR Frameless Glass	8
Frameless with stainless clamp	10
Frameless glass with Spigots	12

A modern black metal pergola with a stone base and railing on a brick house. The pergola features a flat roof with horizontal slats and is supported by thick black columns. A stone-topped base supports a black metal railing with vertical balusters. A set of stone steps leads up to the porch. In the foreground, there is a large white planter with red flowers. The background shows a brick house with windows and a blue sky with scattered clouds.

Our Vision

We believe great outdoor spaces are built from the structure outward. At ETP, our vision is to elevate railings from a requirement into the defining framework of the outdoor environment — engineered for safety, precision, and lasting durability without the burden of maintenance. When paired with our columns, pergolas, and privacy screens, our systems create a cohesive, intentional outdoor experience built to stand the test of time.

Our custom aluminum pergolas are designed to integrate seamlessly with our framed glass and Baluster railing systems, creating a cohesive, finished outdoor space without compromise. Built as a unified ecosystem, ETP products simplify design, detailing, and installation—giving contractors a true one-stop solution and homeowners a clean, fully coordinated result.

ETP Metals was built on a foundation of precision railing manufacturing, where craftsmanship, structural integrity, and clean design first defined our reputation. Emilio and Paolo's approach was shaped under the guidance of their father, Eugene, whose lifetime in metal fabrication instilled a deep respect for how railings must perform, endure, and elevate the spaces they protect. That legacy continues today through advanced manufacturing processes and proven fabrication techniques, delivering premium railing solutions with confidence, consistency, and long-term value.
